

SAMPLING INSTRUCTIONS FUNGI

Please only you should take samples of affected plants.

According to the type of material the sampling will be performed in different bags:

1. STEMS. Cut some stems of the transition zone between the dry and green parts.
2. ROOTS. In the same plant where the samples were taken of stems, some roots will be cut.
3. SOIL. Area around the roots will be taken in plastic bags, at least 300g of soil. Never mix different samples of plants, it is preferable to analyze the plants separately.

Store the sample in a cool dry place, trying not drying the sample and send to headquarters with a cooling plate as soon as possible.

NEVAL More than Labs-Grupo Farmalent S.L

C/Editor Manuel Aguilar 2,4

CP.46001 (Valencia). Telephone 963270079.
